

FACTS ABOUT THE INGREDIENTS IN SATIN SMOOTH® DEPILATORY WAXES

COMBINATIONS OF INGREDIENTS SUCH AS BEESWAX, PINE RESIN, PROPOLIS,
BUILT IN BUFFERS AND RICH EMOLLIENTS PRODUCE THE HIGHEST QUALITY WAX.

BEESWAX

- Produced in Italy, where the vegetation that the bees eat results in the finest beeswax in the world.
- Stringent quality control eliminates all impurities; each wax is 100% pure.

PINE RESIN

- Satin Smooth® waxes contain pine resin, giving the waxes strength and elasticity.
- Adding pine resin to the wax blend is economical and allows the wax to have a smooth silk-like texture, so the wax spreads thinly and evenly to body's contours.

PROPOLIS

Propolis is a natural product made by worker bees by combining pollen, shrub and tree saps with beeswax. Propolis seals and protects the hive from infection and protects the colony from disease. A natural antibiotic credited with antioxidizing, analgesic, antifungal, antibacterial, antiseptic and antiviral properties, propolis is contained in each Satin Smooth wax.

BUILT IN BUFFERS

No need for dusting powders or talc with Satin Smooth waxes. Each wax contains buffers to protect the skin and calm inflammation. Immediately after waxing with Satin Smooth the skin shows no signs of being waxed and the client feels virtually no discomfort.

VITAMIN E

- Vitamin E is contained in both honey formulas.
- Calms inflammation.
- As a buffer, Vitamin E protects skin cells and membranes.
- Moisturizes the skin while protecting it from irritation.

TITANIUM DIOXIDE

- Titanium dioxide is contained in all Satin Smooth cream waxes.
- As a buffer, it protects the skin from irritation.
- Reduces redness and irritation.
- Calms inflammation.
- Gentle on most skin types and sensitive body areas.
- Aids in smooth application and gentle removal of the wax.
