Res-Q™ Analgesic Numbing Cream 3 oz.  
Res-Q™ Ingrown Hair Treatment Pads 40 ct.

### Gloves

### Cotton Rounds

# Thin Film Hard Wax Directions for Male Eyebrows, Ears, and Nose

1. Have client fill out client record card or review past client record card. If reviewing past client record card, please initial and date.
2. Heat wax according to manufacturer directions. The use of gloves will prevent any cross-contamination between you and the client.
3. Cleanse the entire eyebrow area with **Satin Smooth® Satin Cleanser®**. Do not cleanse the nose and ears. These are sensitive areas and need the protection of natural body oil.

### Thin Film Hard Wax for Eyebrows

4. Look at the client's eyebrows. If they need trimming use a small contour scissor with a comb. Brush upwards and trim excess hair. Dip the tip of a petite applicator into wax and wipe one side. Using one hand, pull skin taut towards ear. Apply **Thin Film Hard Wax** under the eyebrow in a straight line in the direction of the hair growth. Do not create an arch unless the client desires one. Wax should be applied thinly, but not too thinly. Wax should be approximately 1/8 of an inch thick in order to encapsulate hair for successful hair removal.

5. Wait 30 seconds for wax to harden. Remove wax from eyebrow by holding skin taut and pulling formed strip in the opposite direction of hair growth.
6. Repeat steps for other side.
7. Removing center of brow. Apply a small amount of wax to clean applicator, **DO NOT DOUBLE DIP**. Apply with Satin Smooth Shrink Wrapping Method, in the opposite direction of the hair growth. Then, quickly pull the wax down in the direction of hair growth and create a lip at the bottom. Remove strip against the hair growth. To allay any discomfort to your client, Satin Smooth suggests applying a small amount of **Res-Q™ Analgesic Numbing Cream** on waxed area. This will relieve any tingling from the hair removal.
8. If there is any wax residue, apply a small amount of **Satin Smooth® Satin Release® Wax Residue Remover**. Then, apply **Satin Smooth® Satin Cool® Aloe Vera Skin Soother Gel**. Cooling gel will reduce any redness and allow pores to close. Finish service by applying a small amount of **Satin Smooth® Satin Hydrate®**. This will restore balance to the skin and moisturize the skin.

### **Thin Film Hard Wax for Ears**

1. Begin by using a small wooden applicator. Dip tip into hard wax. With your hand, rotate wooden applicator in a circular motion. This will allow the hard wax to form a small ball at the end of wooden applicator. Apply at the beginning of the ear canal and leave the applicator in place.

2. Next, place a greater amount of wax on a small applicator and apply to the rim of the ear from bottom to top. This will allow time for the wax in the ear canal to harden and encapsulate the hair.
3. Press firmly on the tragus of the ear. With your other hand, firmly hold the small applicator and pull it out of the ear.

4. Remove wax from the outer rim of the ear. If there is any irritation, apply **Satin Smooth® Satin Cool® Aloe Vera Skin Soother Gel** with a cotton swab. Repeat service on other side.

## **Thin Film Hard Wax for Nose**

1. Always ask the following five questions before performing a nose waxing service:

- 1) Do you have asthma?
- 2) Are you prone to nosebleeds?
- 3) Are you on blood thinners?
- 4) Do you have a cold or a runny nose?
- 5) Do you smoke more than 2 packs of cigarettes a day?

If the client answers Yes to any of these questions, the service cannot be performed!

2. Perform this service ONE nostril at a time. Apply **Satin Smooth® Satin Release® Wax Residue Remover** on the upper lip or mustache. This will prevent any of these hairs from being removed. Place a large applicator coated with **Satin Release** below the nose for protection of the lip area.

3. Begin by using a small wooden applicator. Dip tip into hard wax. With your hand, rotate wooden applicator in a circular motion. This will allow the hard wax to form a small ball at the end of wooden applicator.

4. Apply wax to the inside of the nose, placing it on the outer edge of the inside of the nose. Do not insert past the nose crease. Squeeze nose above crease. This will seal hard wax inside of nose. Leave wooden applicator in.

5. Wait approximately 60 seconds or until wax is hard. Grab small applicator with hand, hold nose and pull straight down very quickly in one quick motion.

6. Repeat Steps 3 to 5 on other side.

7. Apply **Satin Smooth® Satin Cool® Aloe Vera Skin Soother** to a Q-tip or cotton swab. Give to client to cool and soothe inside of nose.

8. Nose wax service can last up to 5 to 6 weeks. **Remember this service can be an add-on service to all men's and ladies' haircuts.**
